

CyberSim: Complete Certification & Online Lab Guide

Your Course Inventory (What You Already Have)

Certification	Course Materials You Own	Status
eJPT	✓ INE Penetration Testing Student v2 (15GB) + Practice Labs	READY
CEH	✓ CEHv13 (Videos + PDFs + Labs + ISO) + CEHv12 Practical Labs	READY
PNPT	✓ TCM Practical Ethical Hacking + PNPT Live Learn to Hack	READY
OSCP	⚠ Prep courses only (HackTheBox prep, OyeSCP) — NO official PEN-200	PARTIAL
OSEP	✗ No official PEN-300 — BUT you have Red Team Ops I & II (CRT0)	ALTERNATIVE

How to Organize for CyberSim

Create this folder structure on your machine: `text ~/Desktop/CEH_Materials/ |— 1_eJPT/ ← Unzip INE Penetration Testing Student v2 here |— 2_CEH/ | |— Videos/ ← CEH v13 mp4 files | |— PDFs/ ← CEH v13 PDF modules | |— Labs/ ← CEH v13 Lab folders |— 3_PNPT/ | |— Course/ ← TCM Practical Ethical Hacking |— 4_OSCP_Prep/ | |— HTB_Prep/ ← How to Hack The Box to Your OSCP |— 5_RedTeam/ | |— CRT0/ ← Red Team Ops I & II`

How to Map These to CyberSim

CyberSim Module	Study Material	Practice In
Phase 1-2 (Recon, Scanning)	eJPT course + CEH Module 02-04	CyberSim Offensive Menu
Phase 3 (Exploitation)	CEH Module 06 + PNPT course	CyberSim VulnSite / Juice Shop
Phase 5 (Passwords)	CEH Module 06 (System Hacking)	CyberSim Offensive Menu
Phase 6 (Wireless)	CEH Module 16	Real WiFi adapter needed
Phase 7 (Social Engineering)	CEH Module 09	CyberSim + SET toolkit
Phase 8 (Network)	CEH Module 08 (Sniffing)	CyberSim Docker targets
Phase 9-10 (OS Hacking)	PNPT + OSCP prep courses	Oracle Cloud VMs
Phase 11 (Advanced)	Sektor7 Malware Dev + CRT0	Oracle Cloud lab

Complete Setup Guide: Free Online Hacking Lab + CEH Resources

This guide will help you build a **free online hacking lab** (like HackTheBox) and share your CEH v13 materials with students — all at **zero cost**.

PHASE 1: Upload CEH Resources (Do This First)

Step 1A: Upload Videos to Telegram

1. **Open Telegram** on your Kali Linux.
2. **Create a Channel:** Name: `CEH v13 Training Lab` , set to **Private**.
3. **Upload to Telegram** — drag and drop each video into the Telegram channel.

Step 1B: Upload PDFs to Google Drive

1. Go to drive.google.com and create folder: `CEH v13 Course Materials`
2. **Upload all PDFs and Labs** to Google Drive.
3. Share the folder (Anyone with the link -> Viewer).

PHASE 2: Create Free Oracle Cloud Account

1. Go to: cloud.oracle.com/free and click "Start for Free"
2. Create your FREE ARM VM:
3. **Image:** Ubuntu 22.04
4. **Shape:** Ampere VM.Standard.A1.Flex (**4 CPUs, 24 GB RAM**)
5. **SSH Key:** Generate and download.
6. Connect: `ssh -i ~/Downloads/ssh-key.key ubuntu@YOUR_PUBLIC_IP`
7. Open Firewall Ports for `8080` , `8443` , `3000` , `5001` .

PHASE 3: Install Docker + CyberSim on Cloud VM

```
``bash
```

Update and install Docker

```
sudo apt update && sudo apt upgrade -y curl -fsSL https://get.docker.com | sudo sh sudo  
usermod -aG docker ubuntu
```

Deploy CyberSim Targets

```
mkdir -p ~/cybersim && cd ~/cybersim cat > docker-compose.yml << 'EOF' version: "3.8"  
services: vulnsite: build: ./vulnsite ports: ["3000:8080"] juiceshop: image: bkimminich/juice-  
shop ports: ["3001:3000"] EOF docker compose up -d ``
```

PHASE 4: Install Apache Guacamole (Browser Desktop)

Create a full Kali Linux desktop accessible via the web browser for your students.

```
bash cat > guacamole-compose.yml << 'EOF' version: "3.8" services: guacd: image:  
guacamole/guacd guacamole-db: image: mysql:8.0 environment: MYSQL_ROOT_PASSWORD:  
root MYSQL_DATABASE: guac MYSQL_USER: user MYSQL_PASSWORD: password guacamole:
```

```
image: guacamole/guacamole ports: ["8080:8080"] depends_on: [guacd, guacamole-db]
EOF docker compose -f guacamole-compose.yml up -d Access via
YOUR_PUBLIC_IP:8080/guacamole
```

PHASE 5: Final Architecture For Students

1. Student opens Chrome browser.
2. Visits `http://YOUR_IP:8080/guacamole` .
3. Gets a FULL Linux desktop in the browser to practice hacking.
4. Uses Google Drive & Telegram links for CEH video/PDF theory.
