

Based on the list you provided, you are actually holding a massive goldmine of exact resources needed to complete this learning path. You have the official courses, lab materials, and prep guides for almost every certification we discussed.

Here is exactly what you have in your directory, mapped to the certification roadmap:

1. eJPT (The Foundation)

You have the exact, official course required to pass the eJPT v2. This is where you should start immediately.

- **The Main Course:** iNE - Penetration Testing Student v2 (eJPTv2).zip (This is a 15GB file, which means it likely contains all the high-quality video modules and lab materials).
- **Alternative/Backup format:** iNE - Penetration Testing Student v2 (eJPTv2)/
- **Extra Labs:** eJPT Certification - Practice Labs for Hands On Experience/

2. CEH (The HR Gateway)

Your repository is heavily stocked with CEH materials across multiple versions. Since the theory doesn't change drastically, focus on the newest ones you have.

- **Latest Version:** CEHv13/
- **Recent/Updated:** Certified Ethical Hacker Elite 2024/
- **Practical Prep:** Certified Ethical Hacker-CEHv12-Practical hands on Labs/
- **Backups:** Certified Ethical Hacker CEH v12 - Videos + PDF Lessons + Lab Manuals/

3. PNPT (Real-World Application)

The PNPT is created by TCM Security, and you have their core curriculum ready to go.

- **The Main Course:** Practical Ethical Hacking - The Complete Course/ (This specific course is the foundational requirement for the PNPT exam).
- **Live Training Version:** PNPT Live Learn to Hack/
- **Older Version (for reference):** TCM Security Academy - Practical Ethical Hacking [2021]/

4. OSCP (Deep Technical Skill)

While Offensive Security tightly controls their official "PEN-200" course materials, you have several specialized prep courses designed to get you ready for the OSCP exam environment.

- **Lab Prep:** How_to_Hack_The_Box_To_Your_OSCP/ (Hack The Box is the standard practice ground for OSCP).
- **Bootcamp:** One Stop Hacking Marathon OSCP DefensiveCloudBug Bounty/
- **Spanish Prep (Likely):** OyeSCP/ (This is a known, highly-rated community prep course for the OSCP).

5. OSEP Level (Advanced Evasion & Red Teaming)

You do not have the official OSEP ("PEN-300") course materials. **However**, you have equivalent (and arguably more modern) Red Teaming courses that teach the exact same advanced evasion concepts:

- **The Direct OSEP Alternative:** Red Team Ops I.zip and Red Team Ops II.zip (These are the CRTO courses by Zero Point Security, which are highly respected industry equivalents to the OSEP).
- **Evasion & Payload Creation:** Red Team Operator Malware Development Essentials/
- **Advanced Evasion:** Sektor7 Malware Development Intermediate/

Next Step:

Since the 15GB iNE - Penetration Testing Student v2 (eJPTv2).zip file contains the exact starting point for this roadmap, would you like advice on how to set up a local virtual machine (VM) lab safely before you unzip and execute any tools from these courses?
